A Commercial Perspective on CFD-DEM

Victor Pavanelli Lira
MSc, CEng MICE
UK CFD Lead

FLOW  Science®

Victor Pavanelli Lira

UK CFD Lead, Flow Science Inc

- Chartered Civil Engineer (MICE)
- 16 years of experience in dam hydraulics, hydropower, drainage and water infrastructure
- Academic background
 - **BSc in Civil Engineering (2010)**
Federal University of Minas Gerais (Brazil)
+ Erasmus at Lulea University of Technology (Sweden)
 - **MSc in Water Engineering (2014)**
Federal University of Minas Gerais (Brazil)
+ Erasmus at Ghent University (Belgium)
Research on CFD (OpenFOAM)
 - **MSc in Geotechnical Engineering (ongoing)**
Imperial College London
Research on DEM (FLOW-3D)
- History being repeated? CFD then, DEM now!

FLOW-3D WATER INFRASTRUCTURE activity since 2006

About **FLOW-3D**...

45 years of development of a general-purpose 3D CFD solver

Focus on free surface flows

Dr C.W. "Tony" Hirt

Origins: **Los Alamos National Labs**

(T-3 Group Fluid Dynamics and Solid Mechanics)

Release of **FLOW-3D** version 1.0

Continuous development of CFD solutions with a focus on free surface flows and multi-physics

1960's

1981

1985

TODAY

About **FLOW-3D**...

- Family of products:
 - FLOW-3D
 - FLOW-3D CAST
 - FLOW-3D WELD
 - FLOW-3D AM
 - FLOW-3D HYDRO

Time: 0.215

FLOW-3D

FLOW-3D

Time: 2.3910 s

About **FLOW-3D**...

- World-wide adoption from:
 - Engineering consulting firms
 - Regulators and water authorities
 - Utilities
 - Academia
 - Free licenses for:
research & teaching
flow3d.com/academic
cristine.webb@flow3d.com

About **FLOW-3D** HYDRO...

Dams & Spillways

Conveyance
Infrastructure

Rivers & Environmental

Water Treatment

Ports & Coastal

About **FLOW-3D** HYDRO...

Dams & Spillways

Conveyance Infrastructure

Rivers & Environmental

Water Treatment

Ports & Coastal

Main problems assessed:

- Spillway capacity & rating curves
- Energy dissipation
- Pressures
- Aerated flows
- Cavitation
- Scour
- Tailings (non-Newtonian) flow

About **FLOW-3D** HYDRO...

Dams & Spillways

Conveyance Infrastructure

Rivers & Environmental

Water Treatment

Ports & Coastal

Main problems assessed:

- Flow capacity
- Flow splitting & overflows (CSO)
- Energy dissipation (drop structures)
- Intake vortex
- Sedimentation
- Air trapping & supply

About **FLOW-3D** HYDRO...

Dams & Spillways

Conveyance Infrastructure

Rivers & Environmental

Water Treatment

Ports & Coastal

FLOW-3D
HYDRO

Main problems assessed:

- Bridge hydraulics
- Scour (bridge & outfalls)
- Fish protection (fishway & screens)
- Sedimentation
- Contaminants & plumes
- Large models (2D/3D)

About **FLOW-3D** HYDRO...

Dams & Spillways

Conveyance Infrastructure

Rivers & Environmental

Water Treatment

Ports & Coastal

Time: 0

Time = 0.00

Main problems assessed:

- Flow splitting
- Contact tanks
- Mixing tanks
- Grit removal
- Clarifiers
- Aeration tanks
- Reaction kinetics

About **FLOW-3D** HYDRO...

Dams & Spillways

Conveyance Infrastructure

Rivers & Environmental

Water Treatment

Ports & Coastal

Introduction

Main problems assessed:

- Breakwaters
- Scour (waves & propeller)
- Ship launches
- Mooring lines
- Navigation locks
- Coastal outfalls
- Wave energy devices

*Commercial perspective
on CFD-DEM
(vs. academic)*

Commercial Perspective (vs. Academic)

What are the market requirements for the adoption of a new modelling method/tool?

- Valuable
 - = Academia
 - The market is focused on the short-term benefits
- Accurate
 - < Academia
 - The market prioritises other requirements
- Reliable
 - > Academia
 - The market is more risk averse
- Practical
 - > Academia
 - The market has shorter timelines

Outline

- Introduction & context ✓
- Commercial perspective on CFD-DEM ✓
- What is the value of DEM?
- Is DEM accurate?
- Is DEM reliable?
- How practical can DEM be?
- DEM challenges in the commercial environment

What is the value of DEM?

Industrial Applications

The value of DEM

Screw Conveyor

Rotating Drums

Time: 0.000 s

Silo Discharge of DRI Pellets

Metal Powder in MEX Printing 16

Industrial Applications

Slurry Settling in a
Storage Tank

Particle classification
by Elutriation

Slurry distribution
line flow

Valve erosion in
slurry lines

Civil & Environmental Applications

Screening Channels

Sand Retention in
SAGD Wells

Time: 4.0 s

Debris Mitigation

Civil & Environmental Applications

Siphon Spillways

Coastal Protection

Landslide

Tailings Dam
Breach

Is the DEM accurate?

Particle-Particle Interaction

Bouncing ball (Verification)

Particle on slope (Verification)

Pile formation (Validation)

Triangular drum (Validation)

Fluid-Particle Interaction

Particle Settling (Verification & Validation)

Packed Bed (ΔP) (Verification & Validation)

Any case specific to the application (Validation)

Is the DEM reliable?

Aspects of Reliability

- Flexibility
 - The particles can be represented in different ways
 - The CFD framework is couple with multiple physics solvers

Aspects of Reliability

- Flexibility
 - The particles can be represented in different ways
 - The CFD framework is couple with multiple physics solvers
- Stability
 - These complex coupling will rarely lead to instabilities – it must converge!

Discretized Equations

$$\begin{aligned}
 u_{i,j,k}^{n+1} &= u_{i,j,k}^n + \delta t^{n+1} \left[-\frac{P_{i+1,j,k}^{n+1} - P_{i,j,k}^{n+1}}{(\rho \delta x)_{i+\frac{1}{2},j,k}^{n+1}} + G_x - FUX - FUY - FUZ + VISX - BX - WSHX \right] \\
 v_{i,j,k}^{n+1} &= v_{i,j,k}^n + \delta t^{n+1} \left[-\frac{P_{i,j+1,k}^{n+1} - P_{i,j,k}^{n+1}}{(\rho \delta y)_{i,j+\frac{1}{2},k}^{n+1}} + R_{i+\frac{1}{2}} + G_y - FVX - FVY - FVZ + VISY - BY - WSHY \right] \\
 w_{i,j,k}^{n+1} &= w_{i,j,k}^n + \delta t^{n+1} \left[-\frac{P_{i,j,k+1}^{n+1} - P_{i,j,k}^{n+1}}{(\rho \delta z)_{i,j,k+\frac{1}{2}}^{n+1}} + G_z - FWX - FWY - FWZ + VISZ - BZ - WSHZ \right]
 \end{aligned}$$

How practical can DEM be?

Aspects of Practicality

- Graphical User Interface
 - Power for the people
 - not only for the hardcore ones!
 - Your time & energy focused on the assessment (not on debugging)

Aspects of Practicality

- Graphical User Interface
 - Power for the people
 - not only for the hardcore ones!
 - Your time & energy focused on the assessment (not on debugging)
- Guidance from DEM Community
 - Too many parameters to select
 - guidance is required to reduce uncertainties and need for extensive sensitivity tests
 - Best practices needed

Material Pair	e_n (Restitution)
Steel - Steel	0.75 - 0.85
Glass - Glass	0.90 - 0.95
Rubber - Concrete	0.60 - 0.75
Rock - Rock	0.50 - 0.70
Sand - Sand	0.10 - 0.30
Wood - Wood	0.40 - 0.60

Material Pair	μ (Friction Coeff.)
Steel - Steel	0.40 - 0.60
Rock - Rock	0.50 - 0.70
Sand - Sand	0.50 - 0.65
Gravel - Gravel	0.55 - 0.75
Rubber - Concrete	0.60 - 0.85
Wood - Wood	0.25 - 0.50
Ice - Ice	0.01 - 0.10

Material Pair	μ_R (Rolling Res.)
Sphere on sphere	0.01 – 0.05
Sphere on flat surface	0.01 – 0.03
Sand / gravel	0.1 – 0.5
Rock / ore	0.2 – 0.6
Coal particles	0.1 – 0.4
Grain / seeds	0.05 – 0.2
Pharmaceutical pellets	0.05 – 0.3

Particles

☒ Enable particles

Name

Mass Particles Properties

Enabled Properties

Definition

Constraints

Fluid Interactions

Other Interactions

Disabled Properties

Thermal

Collisions

Restitution coefficient $e_n (\rightarrow \eta_n)$

Particle-particle collisions

☒ Enable particle-particle collisions

Normal stiffness k_n

Particle deformation limit $\delta_{ij}^n \max$

Friction

Model

Particle-particle friction coefficient μ_{pp}

Particle-wall friction coefficient μ_{pw}

Tangential/normal stiffness ratio k_t/k_n

Tangential/normal damping ratio η_t/η_n

Rolling resistance

Particle-particle rolling resistance coefficient $\mu_{R,pp}$

Particle-wall rolling resistance coefficient $\mu_{R,pw}$

Mobilization angle $\Theta_m (\rightarrow k_R)$

Attraction

☒ Enable attraction

Particle-particle attraction force F_{ij}^a

Particle-wall attraction force

Distance threshold for attraction

DEM challenges in a commercial environment

Challenges to be overcome

- Knowing what particle-to-particles parameters to select for each material
- Lack of established benchmarking test sequence for different cases
- Knowing when angular particles are required
- Particle-to-cell ratio limitation ($\ll 1$) in some frameworks
- Sampling of the particle packing not so practical
- Particle count limitation / computational cost
- Immense lack of DEM users in the market

Thank you!
